Summary

Slightly adjusted this model to fit a generic 7 inch Aliexpress touchscreen.

Tags: [lcd](#) [touchscreen](#) [7inch](#) [7inchdisplay](#)

Adjusted this excellent model to fit [this generic 7 Inch LCD touchscreen from Aliexpress](#) - specifically the IPS version.

7 Inch Raspberry Pi 4/3/2/B/B+/A+ Monitor 1024x600 IPS 5-Points Capacitive Touchscreen Drive Free HDMI Display For Win 7/8/10

1. Removed internal protrusions which would interfere with surface mount components (components are in different positions).
2. Increased space for the "tabs" of the PCB's backplane - original model was just a little too tight for the tabs to slot into place.
3. Increased the slot size on the side to fit the extra USB ports.
4. Moved cutout for power switch.
5. "Pushed through" the diamond airflow holes on the bottom, so the holes actually allow ventilation (previously there was a single line's worth of filament blocking the cutout - not sure if this was intentional).

Front panel + stand remain **unchanged**.

Only caveat is that the VESA mounting points no longer have a protective “back” - I personally wouldn't risk using these screw holes, as you may accidentally screw too deep (heh) and damage the surface mount components on the back of the PCB.
